Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo (soegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial Ecogenic strain of Drosophila DNA provided by the BDGP from the isogenic strain v2; on w sp, the same strain used for the BDGP's pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-mas sequence was carried out as part of a collaboration with the European Droscphila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Droscphila melanogaster BAC ibrary (Dros BAC) was made by Alain Billand at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Determination of this BAC-en sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billand at CEPH (Centre d'Etude du Polymorphisme Humain) with funding proyided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

- Petermination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2: cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B76 bp DNA linear GSS 03-JUN-1999 Drosophila melanogaster genome survey sequence TET3 end of BAC # BACR19114 of RPCI-98 library from Drosophila melanogaster (fruit AL053529 AL053529 IG:4935018
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  141

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (BDGP) - http://www.edgp.ebi.ac.uk - . This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CBPH (Centre for European Drosophila welanogaster BAC wordset with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sites of the pCMVSPORT 6 vector. Determination of this BAC-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (BDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Bros BAC) was made by Alain Billaud at CEPH (Centre Indoorded of Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               527 ададымададылдадылдадададададамтдадамдададтатдададытытимым 468

               The invention relates to a novel composition comprising an isolated DNA molecule comprising Tmp1 recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombination substrates TRI or TRI' sequences are useful for genetic recombination. The title are useful for Tmp1—mediated genetic recombination. The Tmp1—mediated site-specific recombination is useful for deleting or inserting DNA sequences to modulate gene expression, integrating new incleotide sequences into a DNA molecule, such as an episome or genomic DNA, for gene therapy, or for producing food-grade genetically modified organisms. The present sequence represents the Tmp1 recognised target

                                                                                                                                                                                                      The invention relates to a novel composition comprising an isolated DNA molecule comprising TnpI recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombinase TnpI and the recombination substrates TRY or TRY's sequences are useful for genetic engineering. The kits are useful for TnpI-mediated genetic recombination. The TnpI-mediated site-specific recombination is useful for delating or inserting DNA sequences to modulate gene expression, integrating new nucleotide sequences into a DNA molecule, such as an episome or genomic organisms. The present sequence represents the TnpI recognised target (TRI) TRY'
                                         A composition comprising recombinase TmpI and the recombination substrate TRT or TRT' sequences, useful for genetic engineering, TmpI-mediated genetic recombination, or for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      111 TAATACAACACAATATTAATTGTGTTGTATTAGGTGTTATAATAATATAAATCTAGGGG 170

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                     The invention relates to a novel composition comprising an isolated DNA molecule comprising TnpI recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombinase TnpI and the recombination substrates TRT or TRT' sequences are useful for genetic engineering. The kits are useful for TnpI-mediated genetic recombination. The TnpI-mediated site-specific recombination is useful for delating or inserting DNA sequences to modulate gene expression, integrating new nucleotide sequences into a DNA molecule, such as an episome or genomic organisms. The present sequence represents the TnpI recognised target (TRT) TRT',
                                                                                                                                                                                                               A composition comprising recombinase TnpI and the recombination substrate TRT or TRT' sequences, useful for genetic engineering, TnpI-mediated genetic recombination, or for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

The invention relates to a novel composition comprising an isolated DNA molecule comprising TnpI recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombinate TnpI and the recombination substrates TTP or TRT' sequences are useful for genetic engineering. The kits are useful for TnpI-mediated genetic recombination. The TnpI-mediated site-specific recombination is useful. for delating or inserting DNA sequences to medilate gene expression, integrating new nucleotide sequences into a DNA molecule, such as an episome or genomic DNA, for gene therapy, or for producing food-grade genetically modified organisms. The present sequence represents a TnpI recognised target (TRT) functional variant TRT'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A composition comprising recombinase TmpI and the recombination substrate TRT or TRT' sequences, useful for genetic engineering, TmpI-mediated genetic recombination, or for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 TAATACAACACAATATTAATTGTGTTGTTATTAGGTGTTATAATAATATAAATCTAGGGG 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0
                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel composition comprising an isolated DNA molecule comprising TnpI recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombinase TnpI and the recombination substrates TRT or TRT's sequences are useful for genetic engineering. The kits are useful for TnpI-mediated genetic recombination. The TnpI-mediated site-specific recombination is useful for deleting or inserting DNA sequences to modulate gene expression, integrating new nucleotide sequences into a DNA molecule, such as an episome or genomic organisms. The present sequence represents a TnpI recognised target (TRT) functional variant TRT's
                                                                                                                                                                                                                                                                                                   A composition comprising recombinase TnpI and the recombination substrate TRT or TRT' sequences, useful for genetic engineering, TnpI-mediated genetic recombination, or for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

The invention relates to a novel composition comprising an isolated DNA molecule comprising Tnpl recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombinase Tnpl and the recombination substrates TRY or TRY sequences are useful for genetic engineering. The kits are useful for Tnpl-mediated genetic recombination. The Tnpl-mediated site-specific recombination is useful for deleting or inserting DNA sequences to modulate gene expression, integrating new nucleotide sequences into a DNA molecule, such as an episome or genomic or gene therapy, or for producing food-grade genetically modified organisms. The present sequence represents a Tnpl recognised target (TRT) functional variant TRY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A composition comprising recombinase TmpI and the recombination substrate TRI or TRT' sequences, useful for genetic engineering, TmpI-mediated genetic recombination, or for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 TITAACGCAACACAATITATCGATAAATAATACTTTTAGACGCAACACAATTTAT 116

                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                  The invention relates to a novel composition comprising an isolated DNA molecule comprising Tmp1 recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombination substrates TRT or TRT' sequences are useful for genetic engineering. The kits are useful for Tmp1-mediated genetic recombination. The Tmp1-mediated site-specific recombination is useful for deleting or inserting DNA sequences to modulate gene expression, integrating new mucleotides sequences into a DNA molecula, such as an episome or genomic DNA, for gene therapy, or for producing food-grade genetically modified organisms. The present sequence represents a Tmp1 recognised target (TRT)
                                                                                                                                                                                                                              A composition comprising recombinase TnpI and the recombination substrate TRI or TRT' sequences, useful for genetic engineering, TnpI-mediated genetic recombination, or for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Plant; bacterial infection; fungal infection; viral infection; rice;

The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying at least one gene involved in plant resistance or response to pathogenic infection for conferring resistance or tolerance to a plant to bacterial, fungal or viral infection by determining or detecting plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     633 TAATACAAAACAAACATATTTATATTAAATATTAGTTTTAATAAGCTAATTTCATGTT 574

                                                                                                                                                                                                                                        The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes are used for detection/identification of the genes are used for detection/identification of polypeptides encoded by the genes. Proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter cesponse or sensitivity to toxins and antibiotics produced by P. cresponse or sensitivity to toxins and antibiotics produced by P. luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes proteins, vectors containing the genes and Ab are also useful are sensitive to P. luminescens and Ab are also useful as biopesticides. Other uses of the genes and the proteins are as virulence are sensitive to P. luminescens and the proteins are as virulence factors and for identifying targets of human diseases for which P. creat micropial pages and whooping cough). This sequence represents one of the isolated P. luminescens genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            103692 AAAAAAITGIATTTGAATGCGAAGAGAITTCATCAGAAAIGTGTATTGAATACAATAT 103633

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the disgnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid relukaemia, Alzhaimer's disease, Alzhailepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   846

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzoiemer's disease, Alzo, spilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

/dissue_type="Leaf, drought stressed, 1 month old plants,
greenhouse grown"
/lab host="bH108"
/lone="lbe-"Gencor: pBluescript II SK+; Site 1: EcoRI; Site 2:
/note="vector: pBluescript II SK+; Site 1: EcoRI; Site 2:
XhoI; The CDNA library was constructed from mRNA isolated
from drought stressed leaf tissue of the cultivar Williams
82. The month old greenhouse grown plants were deprived of
water for 3 days prior to harvesting the stressed leaf
tissue. Complementary DNA was synthesized from mRNA using
a primer consisting of a poly(dT) sequence with a XhoI
restriction site. EcoRI adapters were ligated to the
blunt-ended cDNA fragments followed by XhoI digestion. The
cDNA fragments were directionally cloned into the
                                                                     Email: est@watson.wustl.edu

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Gosegawa and Maron Mammoser in Pietre de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-38 and was constructed by partial Ecor digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: or bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hypridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
